Office Action Summary

Art Unit: 2174

### **DETAILED ACTION**

1. This application has been examined. The RCE and amendment filed 8/12/02 have been entered.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 10, 12-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Finch et al (5805796) and Ashe et al (6307574).

4. Regarding claim 10, Ashe et al show examining the class definition of a screen element of a gui (column 3 lines 10-20, column 6 lines 10-25) wherein examining is performed without execution of the class definition (column 5 lines 5-14), and identifying an element if the class definition includes a method supporting the element (column 6 lines 5-10 and 34-55). Ashe et al do not specifically state the element is supporting an input device, but does use class definitions to determine support for an element, for analysis and control of the gui system. Furthermore, Finch et al do determine the element is supporting an input device (column 5 lines 60-68 and

column 6 lines 1-20), in a system using class definitions for analysis and control of a gui system (column 8 lines 29-45). It would have been obvious to a person with ordinary skill in the art to have Ashe et al determine an element supporting an input device, because it would provide convenient analysis and control of a gui in a system that uses class definitions for analysis and control of a gui.

5. Regarding claim 12, the examining in Ashe et al is performed at runtime (column 5 lines 7-14).

6. Regarding claim 13, the element is marked if the class definition includes support for the input device (Ashe et al column 5 lines 1-13)

7. Regarding claim 14, Ashe et al show if the process was delegated to other code (column 4 lines 55-68).

8. Claims 15-21 show the same features as above and are rejected for the same reasons.

9. Claims 1-9, 11, 22 are allowable over the prior art of record.

Art Unit: 2174

10. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection. But note that the rejection over Crutcher and Carey has been removed.
